

## D3 Air Single Filer® (High-Speed Horizontal Filer for Can Mfg. Systems)

BW Integrated Systems' Model D3 Air Single Filer is specifically designed for high-speed single filing of aluminum and tinplate cans. The single filer converts a mass of vertical containers into a horizontal single file stream. Applications of this machinery are typical where there is a need to convey containers coming from an air mass conveyor into a high speed single file component such as a decorator. The D3 can manage a gapless single file line at speeds up to 2400 cpm for 12oz decorated aluminum cans. The machinery can also be fine tuned with static pressure regulators to efficiently handle various specified speeds.

### Features:

- Speeds up to 2400 cpm
- Complete compact modular design
- Auto damper system for air control
- D3 frame or remote mounted blower
- Compatible for aluminum, steel and tinplate cans
- Easy, single point adjustment for various can heights and diameters
